the 1990s, the number of people with a diagnosis of schizophrenia has increased in many countries, including the United Kingdom (Murray & Lewis 1992).

There is a growing awareness of the need to improve the lives of people with a diagnosis of schizophrenia. This has led to a number of initiatives, including the development of self-help materials (e.g. *Living with Schizophrenia*, 1995) and the formation of self-help groups (e.g. *Living with Schizophrenia*, 1995).

The purpose of this paper is to describe the development of a self-help manual for people with a diagnosis of schizophrenia. The manual is designed to help people with a diagnosis of schizophrenia to understand their condition and to manage their symptoms.

The manual is based on the experience of people with a diagnosis of schizophrenia and on the experience of mental health professionals. It is designed to be easy to read and to be helpful to people with a diagnosis of schizophrenia.

The manual is divided into four main sections: (1) Understanding your condition, (2) Managing your symptoms, (3) Coping with stress, and (4) Getting help. Each section contains information and advice that is relevant to people with a diagnosis of schizophrenia.

The manual is designed to be used by people with a diagnosis of schizophrenia. It is not intended to be used by mental health professionals. It is designed to be helpful to people with a diagnosis of schizophrenia.

The manual is available in paperback format. It is available from the publishers, *Living with Schizophrenia*, 1995. It is available from the publishers, *Living with Schizophrenia*, 1995.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

There are a number of reasons why the world's population is growing so rapidly. One of the main reasons is that the number of children born to each woman has increased. This is due to a number of factors, including the fact that women are now having children at a younger age, and that there is a higher birth rate in developing countries.

Another reason why the world's population is growing so rapidly is that the number of people who are surviving to old age has increased. This is due to a number of factors, including the fact that there is a higher life expectancy in developed countries, and that there is a higher survival rate for children in developing countries.

There are a number of other factors that are contributing to the world's population growth, including the fact that there is a higher birth rate in developing countries, and that there is a higher survival rate for children in developing countries. These factors are all contributing to the world's population growth, and it is expected that the world's population will continue to grow rapidly in the future.

The world's population is growing so rapidly that it is expected to reach 8 billion by the year 2025. This is a significant increase from the current population of 6 billion, and it is expected that the world's population will continue to grow rapidly in the future.

the 1990s, the number of people with a mental health problem has increased in the UK (Mental Health Act 1983).

There is a growing awareness of the need to improve the lives of people with mental health problems. The Department of Health (1999) has set out a vision of a new mental health system, which will be based on the following principles:

- (i) People with mental health problems should be treated as individuals, with their own needs and wishes.
- (ii) People with mental health problems should be given the opportunity to participate in decisions about their care and treatment.
- (iii) People with mental health problems should be given the opportunity to live in their own homes and communities.

There is a growing awareness of the need to improve the lives of people with mental health problems.
