Excerpt from Encyclopedia Britannica, or a Dictionary of Arts, Sciences, and Miscellaneous Literature, Vol. 14 of 18: Constructed on a Plan, by Which the Different Sciences and Arts Are Digested Into the Form of Distinct Treatises or Systems, Comprehending the History, Theory, and Practice, of Each, According to the Latest Discoveries and Improvements When an infant is born (lays Dr there is every reason to suppose that he is born without ideas. These are rapidly communicated through the medium of the senses. The same senses are all the means of conveying to him pleasure and pain. These are the hinges on which the passions turn: and till the child is acquainted with their sensations, it would appear that no passion could be formed in his mind; for till he has felt pleasure and pain, how can he desire any object, or wish for its removal? How can he be either love or hate? Let us observe then the manner in which love and hatred are formed; for on these passions depend all the rest. When a child endures pain, and is able to detect the cause of it, the idea of pain is connected in his mind with that of the thing which produced it; and if the object which occasioned pain be again presented to the child, the idea of pain associated with it arises also. This idea consequently urges the child to avoid or to remove the object; and thus arises the passion of dislike or hatred. In the same manner, the passion of liking or love is readily formed in the mind of a child from the association of pleasant ideas with certain objects which produced them.
