Leveling the Playing Field Mar 15 2022 Leveling the Playing Field explores the technologies that "trickle down" to the rest of us, those that were once the domain of the wealthy and powerful--and which therefore tended to make them even more wealthy and powerful. Now, though, these technologies--from books to computers to 3D printing and beyond--have become part of a common toolkit, one accessible to almost anyone, or at least to many more than had heretofore had access. This is what happens with most technologies: They begin in the hands of the few, and they end up in the hands of the many. Along the way, they sometimes transform the world.

Dependent Growth: Foreign Investment and the Development of the Automotive Industry in East-Central Europe Jan 21 2020 This book offers a critical analysis of recent developments in the automotive industry of East-Central Europe (ECE). Economists, industry specialists and national governments have considered the rapid development of the automotive industry in ECE in the past twenty years an unqualified success. This rapid growth has been based on large inflows of foreign direct investment (FDI) from Western Europe, North America, Japan and South Korea, and it significantly contributed to GDP growth, created thousands of new jobs, and completely transformed the previously existing automotive industry in the region. This volume offers an analysis that goes beyond uncritical celebratory accounts of this rapid growth. It is based on original, detailed firm-level research conducted by the author in Czechia and Slovakia between 2009 and 2015 that covered assembly firms and the networks of component suppliers. Theoretically and conceptually, the analysis will draw on the global production networks and global value chains perspectives. Drawing on the original empirical data and on additional available information, this volume concentrates on several important questions related to the development of the automotive industry in ECE in the 2000s:• The role of FDI in the rapid development of the automotive industry after 1990 and particularly in the 2000s. • The upgrading of the automotive industry in East-Central Europe through FDI • The position of ECE in the automotive industry research and development (R&D) • The effects of the 2008-2009 economic crisis in the automotive industry of ECE. • The role of state in the rapid development of the automotive industry in ECE in the 1990s and 2000s. • The effects of FDI on domestic firms in the form of linkages between foreign-owned and domestic firms and spillovers from foreign-owned to domestic firms.

Global Business Feb 02 2021 This textbook is designed to help students understand the key issues of global business by connecting theory with reality. Divided into three parts, it covers critical issues of international business, introducing readers to topics they will connect with, and discussing core concepts. With a user-friendly pedagogy and a host of helpful visuals, the authors offer a practitioner's perspective on global business knowledge, examining familiar theory on trade, direct investment, and political environment alongside fresh topics, like geopolitical conflicts, emerging markets, and sustainability. Over sixty case studies are included to illustrate the magnitude and complexity of global business involving different stakeholders. Undergraduate students looking for an introduction to international business and graduate students looking to apply their knowledge will find Global Business stimulating, since it demonstrates how theories and concepts work in real-world business settings.

Automotive Aerodynamics Oct 18 2019 The automobile is an icon of modern technology because it includes most aspects of modern engineering, and it offers an exciting approach to engineering education. Of course there are many existing books on introductory fluid/aero dynamics but the majority of these are too long, focussed on aerospace and don't adequately cover the basics. Therefore, there is room and a need for a concise, introductory textbook in this area. *Automotive Aerodynamics* fulfils this need and is an introductory textbook intended as a first course in the complex field of aero/fluid mechanics for engineering students. It introduces basic concepts and fluid properties, and covers fluid dynamic equations. Examples of automotive aerodynamics are included and the principles of computational fluid dynamics are introduced. This text also includes topics such as aeroacoustics and heat transfer which are important to engineering students and are closely related to the main topic of aero/fluid mechanics. This textbook contains complex mathematics, which not only serve as the foundation for future studies but also provide a road map for the present text. As the chapters evolve, focus is placed on more applicable examples, which can be solved in class using elementary algebra. The approach taken is designed to make the mathematics more approachable and easier to understand. Key features: Concise textbook which provides an introduction to fluid mechanics and aerodynamics, with automotive applications Written by a leading author in the field who has experience working with motor sports teams in industry Explains basic concepts and equations before progressing to cover more advanced topics Covers internal and external flows for automotive applications Covers emerging areas of aeroacoustics and heat transfer *Automotive Aerodynamics* is a must-have textbook for undergraduate and graduate students in automotive and mechanical engineering, and is also a concise reference for engineers in industry.

Communications Writing and Design Aug 08 2021 *Communications Writing and Design* is an integrated, project-based introduction to effective writing and design across the persuasive domains of communication. Build a strong foundation of core writing and design skills using professionally-designed examples that illustrate and reinforce key principles Readers learn and analyze techniques by creating 15 projects in marketing, advertising, PR, and social media with the help of strategy suggestions, practical tips, and professional production techniques Written by an experienced professional and teacher, with a focus on the cross-disciplinary nature of contemporary communication work Learning is reinforced through a variety of pedagogical features: learning objectives, helpful mnemonics, real-life projects and applications, chapter references for further study, and end-of-chapter summaries and exercises A companion website with multimedia slides, exam questions, learning videos, and design guides provides additional learning tools for students and instructors

Advances in Ergonomics In Design, Usability & Special Populations: Part I Nov 23 2022 Successful interaction with products, tools and technologies depends on usable designs and accommodating the needs of potential users without requiring costly training. In this context, this book is concerned with emerging ergonomics in design concepts, theories and applications of human factors knowledge focusing on the discovery, design and understanding of human interaction and usability issues with products and systems for their improvement. This book will be of special value to a large variety of professionals, researchers and students in the broad field of human modeling and performance who are interested in feedback of devices' interfaces (visual and haptic), user-centered design, and design for special populations, particularly the elderly. We hope this book is informative, but even more - that it is thought provoking. We hope it inspires, leading the reader to contemplate other questions, applications, and potential solutions in creating good designs for all.

Electric Vehicles: Prospects and Challenges Apr 04 2021 *Electric Vehicles: Prospects and Challenges* looks at recent design methodologies and technological advancements in electric vehicles and the integration of electric vehicles in the smart grid environment, comprehensively covering the fundamentals, theory and design, recent developments and technical issues involved with electric vehicles. Considering the prospects, challenges and policy status of specific regions and vehicle deployment, the global case study references make this book useful for academics and researchers in all engineering and sustainable transport areas. Presents a systematic and integrated reference on the essentials of theory and design of electric vehicle technologies Provides a comprehensive look at the research and development involved in the use of electric vehicle technologies Includes global case studies from leading EV regions, including Nordic and European countries China and India

The Road to Eden is Overgrown Nov 18 2019 Nicks, former soldier, ex police specialist firearms officer and high functioning 'Aspie', has a natural ability to hit whatever he's aiming at. One dark, cold night, grieving for his late wife, the love he couldn't save, he continues his attempts to drink himself to death when he's approached by a mysterious stranger with an unusual job offer. Assassin. Meanwhile, DCI Thurstan Baddeley, takes over his new desk at the local Police Force's Major Investigations Team. Naturally, he's expecting to deal with a few 'odd' murders, it's what they specialise in, but what he didn't expect was the arrival of an assassin, and certainly not one who would hang around so long. He soon realises this is no ordinary 'hitman', organised crime he could happily deal with but there's something about this one that makes him suspect bigger forces at play. Afraid of interference from Special Branch, he plays it close to his chest, concealing relevant facts from those above him. As the investigation progresses, Baddeley learns that he and Nicks have both experienced deep personal loss; Nicks his wife and Baddeley his parents. Both have been members of the Army's Special Investigation Branch. With nothing more than an evidentially unusable blurry close up, an odd record of cash withdrawals, personal history and a gut feeling, the DCI sets out to find and arrest his quarry.

The Hauntup Jun 25 2020 "Tis an art to be in the right place at the right time. But, remember, I am the artist, and I put you in my painting for a reason." When a mysterious stranger on Twitter summons Mitra, Siddhart, Priya, Radhika and Arvind to meet up at a 'haunted' location every Saturday night, they have no idea what they're getting into or how drastically their lives are going to change. The promise of adventure drives the thrill-seekers to take up the challenge, but soon this paranormal quest starts to play with their psyche and things take several chilling turns. As the lines between reality and surreal blur, the five find themselves at the centre of a two-decade-old unsolved murder mystery of a young Carnatic singer and are plunged into the dark and sinister world of The Hauntup, from which there is no escape—unless they do exactly what the stranger asks!

The Leader's Character Jan 13 2022 The Department Of Defense Dictionary of Military and Associated Terms defines responsibility as, the obligation to carry forward an assigned task to a successful conclusion. With responsibility comes authority to direct and take the necessary action to ensure success. Simply put, the practicing and developing leader has the ability to respond." This book is about the leader's responsibility to never stop reinforcing and developing character that people want to follow. No organization is going to place someone in a position of responsibility without trusting or believing that the leader possesses the character and necessary ability for successful accomplishment of it's most important task; leading the organization's people.

Nonlinear Optimization of Vehicle Safety Structures Oct 30 2020 Nonlinear Optimization of Vehicle Safety Structures: Modeling of Structures Subjected to Large Deformations provides a cutting-edge overview of the latest optimization methods for vehicle structural design. The book focuses on large deformation structural optimization algorithms and applications, covering the basic principles of modern day topology optimization and comparing the benefits and flaws of different algorithms in use. The complications of non-linear optimization are highlighted, along with the shortcomings of recently proposed algorithms. Using industry relevant case studies, users will how optimization software can be used to address challenging vehicle safety structure problems and how to explore the limitations of the approaches given. The authors draw on research work with the likes of MIRA, Jaguar Land Rover and Tata Motors European Technology Centre as part of multi-million pound European funded research projects, emphasizing the industry applications of recent advances. The book is intended for crash engineers, restraints system engineers and vehicle dynamics engineers, as well as other mechanical, automotive and aerospace engineers, researchers and students with a structural focus. Focuses on non-linear, large deformation structural optimization problems relating to vehicle safety Discusses the limitations of different algorithms in use and offers guidance on best practice approaches through the use of relevant case studies Author's present research from the cutting-edge of the industry, including research from leading European automotive companies and organizations Uses industry relevant case studies, allowing users to understand
