Reference Manual on Scientific Evidence Dec 01 2020 The Reference Manual on Scientific Evidence, Third Edition, assists judges in managing cases involving complex scientific and technical evidence by describing the basic tenets of key scientific fields from which legal evidence is typically derived and by providing examples of cases in which that evidence has been used. First published in 1994 by the Federal Judicial Center, the Reference Manual on Scientific Evidence has been relied upon in the legal and academic communities and is often cited by various courts and others. Judges faced with disputes over the admissibility of scientific and technical evidence refer to the manual to help them better understand and evaluate the relevance, reliability and usefulness of the evidence being proffered. The manual is not intended to tell judges what is good science and what is not. Instead, it serves to help judges identify issues on which experts are likely to differ and to guide the inquiry of the court in seeking an informed resolution of the conflict. The core of the manual consists of a series of chapters (reference guides) on various scientific topics, each authored by an expert in that field. The topics have been chosen by an oversight committee because of their complexity and frequency in litigation. Each chapter is intended to provide a general overview of the topic in lay terms, identifying issues that will be useful to judges and others in the legal profession. They are written for a non-technical audience and are not intended as exhaustive presentations of the topic. Rather, the chapters seek to provide judges with the basic information in an area of science, to allow them to have an informed conversation with the experts and attorneys.

Life Jan 02 2021 How can we think of life in its dual expression, matter and experience, the living and the lived? Philosophers and, more recently, social scientists have offered multiple answers to this question, often privileging one expression or the other – the biological or the biographical. But is it possible to conceive of them together and thus reconcile naturalist and humanist approaches? Using research conducted on three continents and engaging in critical dialogue with Wittgenstein, Benjamin, and Foucault, Didier Fassin attempts to do so by developing three concepts: forms of life, ethics of life, and politics of life. In the conditions of refugees and asylum seekers, in the light of mortality statistics and death benefits, and via a genealogical and ethnographical inquiry, the moral economy of life reveals troubling tensions in the way contemporary societies treat human beings. Once the pieces of this anthropological composition are assembled, like in Georges Perec's jigsaw puzzle, an image appears: that of unequal lives.

Competition Index Program User's Manual Feb 03 2021 One of the major limitations to evaluating the need, timing, and intensity of forest vegetation treatments is the lack of an appropriate quantitative technique for assessing the nature of the non-crop vegetation component and linking that to conifer crop tree size, growth, and vigor. This report documents a data capture program developed for collecting and analyzing competition index data and results. It includes procedures for data collection and editing, data analysis, data downloading and archiving, and report generation. The program, written in GW-BASIC, is designed to run on a MS-DOS compatible computer with a minimum of 256K system memory and a 640K random access memory disk. The program is capable of displaying or printing the competition index values by species following each plot. Appendices to the report include lists of codes used in the program, sample reports, and troubleshooting hints.

Use of Services for Family Planning and Infertility, United States, 1982 Nov 19 2019 The 1982 statistics on the use of family planning and infertility services presented in this report are preliminary results from Cycle III of the National Survey of Family Growth (NSFG), conducted by the National Center for Health Statistics. Data were collected through personal interviews with a multistage area probability sample of 7969 women aged 15-44. A detailed series of questions was asked to obtain relatively complete estimates of the extent and type of family planning services received. Statistics on family planning services are limited to women who were able to conceive 3 years before the interview date. Overall, 79% of currently married nonsterile women reported using some type of family planning service during the previous 3 years. There were no statistically significant differences between white (79%), black (75%) or Hispanic (77%) wives, or between the 2 income groups. The 1982 survey questions were more comprehensive than those of earlier cycles of the survey. The annual rate of visits for family planning services in 1982 was 1077 visits /1000 women. Teenagers had the highest annual visit rate (1581/1000) of any age group for all sources of family planning services combined. Visit rates declined sharply with age from 1447 at ages 15-24 to 479 at ages 35-44. Similar declines with age also were found in the visit rates for white and black women separately. Nevertheless, the annual visit rate for black women (1334/1000) was significantly higher than that for white women (1033). The highest overall visit rate was for black women 15-19 years of age (1867/1000). Nearly 2/3 of all family planning visits were to private medical sources. Teenagers of all races had higher family planning service visit rates to clinics than to private medical sources, as did black women age 15-24. White women age 20 and older had higher visit rates to private medical services than to clinics. Never married women had higher visit rates to clinics than currently or formerly married women. Data were also collected in 1982 on use of medical services for infertility by women who had difficulty in conceiving or carrying a pregnancy to term. About 1 million ever married women had 1 or more infertility visits in the 12 months before the interview. During the 3 years before interview, about 1.9 million women had infertility visits. For all ever married women, as well as for white and black women separately, infertility services were more likely to be secured from private medical sources than from clinics. The survey design, reliability of the estimates and the terms used are explained in the technical notes.

User's Software Manual for Inspection and Rating of Concrete in Gravity Dams, Retaining Walls, and Spillways Feb 21 2020 The U.S. Army Corps of Engineers operates approximately 270 navigation dams constructed of plain or reinforced concrete. The Corps also operates more than 350 reservoir dams, most of which are either concrete gravity structures or embankment structures with attachments and appurtenances constructed of plain or reinforced concrete. Many of these structures will require significant repairs to ensure safe and efficient operations. Modern engineering technology provides procedures for performing condition surveys, consistent and quantitative condition assessments, and database management. Combined with economic analyses, these procedures afford efficient maintenance and repair (M & R) budget planning through evaluation of the current condition and comparison of various M & R alternatives based on life-cycle costs. Collectively, these procedures are called the REMR Management Systems. This user's manual describes use of the software associated with the REMR Management Systems. Users familiar with Maintenance Management System software for other Civil Works Structures monoliths will find this program for the Concrete in Gravity Dams, Retaining Walls, and Spillways very similar. The system was developed for operation on an IBM-compatible personal computer that runs MS-DOS version 5.0 or higher. A hard disk drive is required with at least 20 MB of available storage capacity recommended. Memory of 640k RAM is also required.

Wpiper 1.0 with flow reduction module, implementation guide and user's manual... Dec 25 2022 Deterioration of underground water distribution systems composed of unlined metallic pipe is a serious and costly problem at Army installations. Several repair options are possible, and the process of choosing the best one is highly dependent upon installation-specific conditions. WPIPER 1.0 with Flow Reduction Module is a maintenance management system that can help Army installations make cost-effective repair decisions for unlined metallic water distribution systems. The system includes a pipe network inventory, hydraulic modeling capabilities, prediction of internal flow reduction, prioritization, and economic analysis. WPIPER 1.0 enables the engineer to determine when a specific area of the distribution system will no longer meet fire flow requirements and to select the best remedial alternative. This report describes the WPIPER 1.0 system, methods of collecting input data, and procedures for operating the program. WPIPER was developed to operate on an IBM-compatible personal computer running MS- or PC-DOS. The minimum recommended system configuration includes an 80386-based system with 640 kilobytes (KB) of conventional RAM, 2 megabytes (MB) expanded memory with an EMS driver, a math coprocessor, and a fixed (hard) disk drive with a minimum capacity of 20 megabytes (MB).
