comprehensive history of polar exploration from the ancient period through the present day. The author is a noted polar scholar and offers dramatic accounts of all major explorers and their expeditions, together with separate exploration histories for specific islands, regions, and uncharted waters. He presents a wealth of fascinating information under a variety of subject entries including methods of transport, myths, achievements, and record-breaking activities. By approaching polar exploration biographically, geographically, and topically, Mills reveals a number of intriguing connections between the various explorers, their patrons and times, and the process of discovery in all areas of the polar regions. Furthermore, he provides the reader with a clear understanding of the intellectual climate as well as the dominant social, economic, and political forces surrounding each expedition. Readers will learn why the journeys were undertaken, not

Publisher description An ecological baseline study was conducted on the Monterey breakwater. Qualitative and quantitative survey of the plants and animals occupying meter square quadrats along a cross-sectional transect covering the breakwater and the adjacent mud bottom out to depths of 13 meters was made. Overall, the differences between the populations of the inner and outer parts of the breakwater appeared minor and primarily involved differences in relative abundance of only a few

species. Data from this study establish an ecological baseline for future studies on the Monterey breakwater. (Author). A weekly review of politics, literature, theology, and art.
