The purpose of this tool, the Nursing Communication Observation Tool (NCOT), is to assist you as an observer in collecting and analyzing data about interpersonal communications. It is patterned after the work of Robert Freed Bales of the Center for the Behavioral Sciences at Harvard University and designed for observing any interpersonal communication occurring in nursing practice contexts in which you, as a nurse, interact with your clients, peers, leaders, and colleagues of nursing and other health care professions. Selection from Marilyn S. Kelly, Study guide & Activity manual to accompany DeVito's Building interpersonal communication skills, 4/e and an appendix by Laurence L. Powell.
