Excerpt from The Block System of Signaling on American Railroads: The Methods and Appliances Used in Manual and Automatic Block Signaling The student of block signaling encounters interlocking at almost every turn, and it is believed that no apology is necessary for adding to this work brief descriptions of the principal types of interlocking machines in use in America. In these descriptions, as in those of the mechanical features of block signaling, the purpose has been to show the methods of working, rather than details of material or construction. Signals and signal machinery have been developed by many different engineers and inventors, and the experience and studies of these men have been extensive and varied; so that the number of devices having merit is large. To adequately describe these, or even to outline the present state of the art, would require a treatise, and lead beyond the scope of this work. It is much easier to understand than the IEE Code

of Practice (COP). It strikes a balance between giving enough technical background and easy to follow practical advice in implementing a PAT testing scheme. Someone wanting to undertake PAT testing using a PASS/FAIL PAT Tester need only read through the Overview, Planning and Doing the Work sections to get started. If they come across any appliances that they are not quite sure how to test, then a quick look within the Test Examples section should provide an answer. For those wanting more technical information on how the tests are done and how to interpret the test results, the PAT Testing: Technical Information section should provide all the answers they are looking for. This section contains many practical tips and hints regarding PAT Testing of a variety of appliances that are found in offices, homes, schools and factories. Many of these are based around questions either from delegates or calls to our technical support line. Useful reference information has been tucked away in the Appendix. This includes a chapter on Basic Electrical Theory and a background to Electric Shock. This book is equally valuable to the newcomer to PAT Testing who intends to test in-house as well as the more experienced practitioner who plans to provide a PAT Testing service to other companies.
